Summary

I'm a first-year PhD student at The University of Tokyo, advised by Yutaka Matsuo, and closely collaborated with Hiroki Furuta.

My ultimate goal is to build **real-time, interactive world models** that seamlessly translate human imagination into reality—empowering anyone to craft and mold their envisioned worlds with intuitive and precise control.

To move toward this vision, my research focuses on video diffusion models and world models. This includes recent work on **alignment** and **subject-driven generation** to enhance fine-grained controllability. Furthermore, I address the fundamental challenge of **memory mechanisms** to ensure long-horizon consistency in generative environments.
